

# Converting an E01 Encase Image to a Flat File Image

This video shows how to convert an Encase (Expert Witness Format \*.e01 or \*.s01) or Smart Image to a full or segmented flat file image.

Converting an image allows is something an examiner may do on a regular basis. Especially if he/she wishes to mount the image as a physical device or volume. This also allows you to run other tools across a forensic image that does not support the expert witness file format.

The video demonstrated setting the module properties to select whether the image is segmented or single file and to set the segment size. The e01 Professional Module is FREE with the purchase of any Blade Professional Module.
