

Change Log v1.52

Build	Release Date
1.52.10329.199	25th November 2010

New Feature

- Added support for USB licence dongle (dongle must contain NetAnalysis or HstEx licence)
- Added new feature to rebuild all cached pages and export all cached items in one process
- Added support for all versions of Google Chrome
- Added Google Chrome Cache Extraction and Page Rebuilding
- Added Safari Cache Extraction and Page Rebuilding
- Added support for Firefox v3 Downloads (downloads.sqlite)
- Added Referring URL for Firefox 3 History
- Added support for Redirects in Firefox Cache
- Now Remembers PDF Export Folder
- Time Zone auto-set for secondary import
- Time Zone cannot be changed after data has been imported to prevent time zone clashes
- File » Print now shows print dialogue to allow settings to be modified
- Print to PDF opens the file at completion of the print
- Export to CSV function re-enabled
- Export to CSV, TSV now considerably faster and includes field headers
- Export functions now have progress indicator
- Export functions open the export folder on completion and highlight the exported file
- Keyboard shortcut mappings updated
- New option to restrict the import data to a date range (useful for eDiscovery restricted date ranges)
- N100128 F6 reverts to executing a keyword list search as in previous versions
- N100120 New function - F2 find next tagged record

Bug

- N100126 Prompts to save case information on print if initially set in options
- N090105 When checking for updates, the version numbers returned are not correct
- N100121 When no time zone adjustment selected, Microsoft IE weekly records are not imported
- N100119 Grid does not display all records when very large workspace is loaded
- N100117 Incorrect TZ warning shown in status column when multiple time zones exist
- N100116 Incorrect time zone doesn't exist warning when opening a workspace imported in Windows 7
- N100115 When checking for updates, version numbers not returned correctly
- N100125 On save workspace "Remove Filter" is disabled if filter is active
- N100127 Fixed issue with NETX filter not showing other workspaces on save
- N090112 Issue with Class Not Registered relating to DAO 3.6
- N100124 Errors reported when running an SQL Query from the Query Builder
- N100113 Unable to import Firefox/Google Chrome History on mounted read only volume if Journal file exists
- N100138 Safari Binary PLIST record index does not change
- N100139 Unable to parse Mozilla moz_places table in Limewire because of missing last_visit_date field
