

# Epic Privacy Browser

## Introduction

Epic Privacy Browser was released on August 29, 2013 and is developed by Hidden Reflex using the Chromium source code, developed for the security conscious. Epic Privacy Browser is (by default) always in "private browsing mode", taking a proactive approach to ensuring that session data (such as cookies, history, and cache etc) are removed upon exit. The browser also removes Google tracking and blocks other organisations from tracking users.
