

# AVG Secure Browser

## Introduction

AVG Secure Browser is a Chromium based web browser with a built-in security and privacy centre. This browser includes a number privacy features such as; anti-fingerprinting, anti-tracking and stealth mode. Furthermore, it blocks websites, targeted advertisements, and other web services from tracking any online activity. Security experts designed this with safety and sensibility in mind; users can expect a familiar, easy-to-use interface that allows them to surf the internet free from worries and inconveniences. AVG Secure Browser also offers the user a chance to opt in to use the included AVG Secure VPN integration, a military-grade encrypted VPN with levels of 256 bit AES, adding an extra layer of protection allowing users to feel safe from prying eyes and gain access to content not available in their country.

AVG Secure Browser does not require complex installation, configuration, or other adjustments in your browser settings and is perfect for those that want to experience incredible bandwidth speed, at the same time, save sensitive information from hackers, scammers, and viruses.
