Data Recovery of Adobe PDF and Microsoft Word Documents from Logical Volume

This video shows how to recover Adobe PDF and Microsoft Word documents from a logical volume using Blade.

The user simply selects the volume to recover the data from and tick the appropriate files to recover. Select the export folder and click the Start button. Just a few clicks of the mouse and Blade will search the volume sector by sector looking for the headers / footers and landmarks.

One the data has been identified, on stage two, the files will be read from the disk and written to the export folder.
