

7 Star Browser

Introduction

7 Star Browser is a free Chromium-based browser from Seven Star Studio (Beijing Kuaisou Technology Co Ltd). The main feature of this web browser is its support for dual processors, claiming to utilise the Blink (Chrome) and Trident (Internet Explorer) browser engines. This allows the user to switch between kernels on-the-fly which can be helpful for optimising CPU and browsing speed.

Additionally, it allows the user to change the look of some of the graphical elements of the program, such as: tabs, bars, address bar location and whether or not to display the program menu.
